

My sleep experiment

Two phases, at your own pace. Record near waking; gaps are okay.

Name (optional)

House / year (optional)

01 Notice your usual sleep

Baseline: record your routine. Review after five entries; keep logging if useful.

Morning date	Lights out	Minutes to fall asleep	Night wake-ups	Awake minutes**	Out of bed	Day felt 1-5	Changes done*

02 Try your chosen changes

Changes phase: mark A, B or C for habits tried. Compare after five entries.

Morning date	Lights out	Minutes to fall asleep	Night wake-ups	Awake minutes**	Out of bed	Day felt 1-5	Changes done*

* My chosen changes

- A
- B
- C

Day felt: 1 = very low energy, 3 = in between, 5 = very good energy.

** Total awake after first falling asleep, including before getting up. Estimates are fine.
